BUGS IN A BUCKET®

MICROBIAL WASTEWATER TREATMENT

PIT PLUS

BUGS IN A BUCKET® PIT PLUS is a highly effective blend of beneficial bacteria designed to accelerate degradation of organic wastes and toilet paper, reduce odours and keep pit toilet systems operating efficiently.

APPLICATIONS

- Pit toilets.
- Portable toilets.

FEATURES

- A highly effective blend of beneficial bacteria to keep the system operating efficiently.
- Accelerate break down of organic wastes and toilet paper within the pit toilet.
- Highly effective odour control - beneficial bacteria work to tackle odour at the source.
- Eco-benign technology and a simple application process make this a safe product for the user and the environment.
- The Bacillus strains in Pit Plus have been scientifically developed to promote the rapid breakdown and digestion of various forms of black and grey waste water including organic waste matter, toilet paper, detergents, greases, fats, oils, paper and other organic waste materials commonly found in these systems.
- The Bacillus strains in our product are fast growing.
- They are proven to enhance floc formation for rapid start-up and create biomass that is more resistant to chemical loads such as bleach.

DOSING

- Available as a single water-soluble sachet.
- Dose 1 x 200g sachet directly into each pit toilet or portable toilet.
- If possible, hydrate the sachet in water for an hour before dosing into the pit toilet.

Active Ingredients:

- Bacillus bacteria

Concentration:

- 2 Billion CFU/g

Physical Properties:

- Tan coloured powder
- Odourless

Packaging:

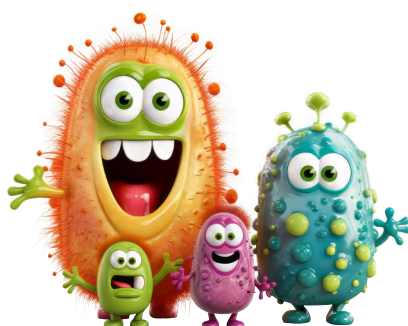

- Single 200g water soluble sachet

Storage and Handling:

- Dry and cool
- Keep container closed tightly when not in use

Shelf Life:

- 2 years
